DETAILED ACTION

Applicants' amendment dated 08/30/2007 has been received and entered. By the amendment, claims 1-2, 4-8, 10-11 and 23-24 are pending in the application. Claims 9 and 12-20 stand withdrawn from consideration.

Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection as follow:

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-2, 4-8, 10-11 and 23-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kodate, US 5,748,266, in view of Rho et al., US 6,862,050.

Regarding the above claims, Kodate's figure 8 and accompanying text discloses a liquid crystal display (LCD) device comprising:

- . a lower substrate (TFT substrate 12) having a seal pattern portion (64)
- . a gate electrode (20)
- . a gate insulating layer (44)
- . a thin film transistor (TFT 16)
- . a passivation layer (52) as claimed
- . a pixel electrode (10)

- . a liquid crystal layer (34)
- . an upper substrate (72)
- . a color filter (32)
- . a common electrode (30)
- . a spacer (78)
- . the seal pattern (64) having a constant thickness is directly on the gate insulating (44)3.

Kodate, however, does not disclose the pixel electrode selectively covered the passivation layer. Rho et al. do disclose an LCD device, in which a pixel electrode (140) can be selectively covered a passivation layer (100) as shown in figure 3. Therefore, it would have been obvious to one skilled in the art at the time of the invention was made to employ the Kodate's device having a pixel electrode that covered a passivation as shown by Rho et al. in order to increase the storage capacitance (see paragraph bridging col. 5 and 6).

Regarding method claims 7-8, since the method of manufacturing the device is merely a list of forming each component and each component must be formed to make the device, the method of manufacturing would be inherent to the device.

Conclusion

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
